Well, group, the project proposal you submitted looks good. Have you thought about which of the applications you'll be using?

I'm going to try out that screencasting application and capture some parts of that article, and images of the wax room caterpillar, and some facts about plastic in the oceans.

I can't wait to create my part using the cartoon creation part, it looks pretty easy.

I was thinking of using the video he took at the beach and adding text and information to it about recycling plastic bags. There were a lot of them at the beach. I'll add the information and graphs I found about plastic bags and the alternatives. Willis, are you still going to do the infographic?

Well, I saw that you could create an animation with Powtoon. I'd like to do that instead of the infographic.

Well, be sure to look at the advantages and disadvantages of the application you're choosing, to make sure it's a good tool for your ideas. Your ideas and digital artifacts will give you a great start for the next quest remix.

Well, let's help each other if anyone gets stuck on an application. I might need it for my screencasting work.

Oh, I did a screencast for my math class showing how to solve an equation, I'll help you.

Has anyone used PowToon before?

No, but I'd really like to learn more, too. Once I get my video edited, I'll help you out.

Thanks.

Well, that's what I call great group collaboration.
